

Greetings,

I am Ajay Kannan and I am a student of ASU studying MS computer science. I am interested to work in the tech space and choose it as my career option.

To tell you where I am coming from, I went to Anna University, CEG, India, which is a prestigious college, and did my bachelors in Computer science and engineering.

Over my time in CEG, I researched in static Gesture Recognition and presented a paper on it in Global IoT Summit, Geneva. Similarly, I have submitted a paper on dynamic gesture recognition, which was presented by a colleague. Other than that, I have also worked as a TA for 3 courses and RA for 3 courses. I have done an internship in Microsoft, IDC Hyderabad 2017 and 2018.

Due to some health circumstances, I was not able to work for two years. But, I was in constant touch with my field through online courses. I have done a course of Flutter App development and Deep learning from Coursera. Following that, recently, I have a job at Sigtuple as a data scientist where I worked on image processing on biological data across India.

Overall growth is required for a successful career path. Exposure to practical real-life problems would enhance my problem solving capabilities. I seek this opportunity to gain an overall experience. I believe that I can fulfil your job requirements, thereby allowing me to learn more.

Anticipating a favourable reply,

Thanks and Regards,

Ajay Kannan
